RE: 15-Day Pre Permit Construction Approval Application

Dear DEQ,

We are proposing to construct an anaerobic digester at the East Valley Cattle facility that will collect the biogas from the cow manure and transform it into renewable energy through the use of four reciprocating engines and generators. Documentation from Kleinfelder is included in the application demonstrating that they have performed the screening level modeling and found that the proposed emissions will not cause or significantly contribute to a violation of any air quality standards. A copy of the approved modeling protocol and a copy of the public notice meeting are also attached. Please review the attached application for the pre-permit construction approval and let us know if you have any questions.

Kyle Juergens with Andgar Corporation is our representative for this application. Please send all correspondence to him. (360-366-9900 or kylej@andgar.com)

Based on information and belief formed after reasonable inquiry, the statements and information in the document are true, accurate, and complete.

Sincerely,

5-12-08

Ryan Coleman

1 PROCESS DESCRIPTION

Cargill Environmental Finance proposes to construct an anaerobic digester renewable energy system on property leased from East Valley Cattle. The site is located in Declo, Idaho and presented in Figures 1 through 3. The facility is within Cassia County, Idaho which is designated attainment or unclassifiable for criteria pollutants.

1.1. Process Description

Manure from the feedlot will be pumped into the anaerobic digester where the naturally occurring digestion process will result in the production of methane gas. Methane gas will be collected in the anaerobic digester and used as fuel in four Genset reciprocating internal combustion engines. The generators will produce electricity that will be sold to the local utility. Heat produced from the Genset electrical generators will be used to maintain the operating temperature in the digester and as process heat for the feedlot. The post digester manure is separated so the liquid portion can be utilized for irrigation and fertilizer while the solids are utilized as bedding and a soil amendment. A process flow diagram is presented in Figure 4.

The project includes the installation of the manure digester and generators. East Valley Cattle will operate the feedlot and manage the solids and wastewater generated by the process. This permit application is being submitted to allow construction and operation of the digester and electrical generating system. Air emissions from the system are released through the four stacks associated with the Genset generators and an emergency flare that would be used in the event the generators are taken offline. Characteristics of the emissions from all of the emission points are the same.

The proposed anaerobic digester renewable energy system will be constructed by Andgar Corporation and operated by Cargill Environmental Finance on property leased from East Valley Cattle. The generators emissions will result in criteria pollutant emissions of carbon monoxide, particulate matter, nitrogen oxides, sulfur dioxide and volatile organic compounds. The generators will also emit toxic air pollutants (TAPs).

1.2. Facility Classifications

SIC: 4911

The facility is classified by the Standard Industrial Classification # 4911 for Electric Services.

NAICS: 237130

The facility is classified by the North American Industry Classification System # 237130 for Alternative Energy Structure Construction.

2 PRE PERMIT CONSTRUCTION ELIGIBILITY

Pre-permit construction approval is available for new minor sources that do not use emissions netting to stay below major source levels. The proposed project meets all of the pre-permit construction eligibility requirements. The emission calculations and data source reference information are provided in this application.

Andgar is requesting from IDEQ the ability to commence construction of the source before receiving the required permit to construct. The owner understands that proceeding with construction prior to receiving the required permit to construct is at their own risk. This request is presented in the cover letter for this application.

The pre-permit construction process requires a meeting with DEQ representatives before submitting the pre-permit construction permit. Kleinfelder representatives met with Kevin Schilling, Bill Rogers and Harbi Elshafei of IDEQ on April 9, 2008 to discuss the project and pre-permit application.

An informational meeting has been scheduled at the Best Western Hotel and Convention Center in Burley, Idaho on May 15, 2008. The meeting announcement was published in the Times-News, which is a newspaper with general circulation in Twin Falls. A copy of the notices published in the Times-News is presented in Appendix D.

3 APPLICABLE REQUIREMENTS

3.1. Major or Minor Facility Designation

The proposed project is considered a minor facility based on it's potential to emit. Please see detailed emission calculations in Appendix D.

Designated: ☐ Yes ☒ No

Potential To Emit: 89.8 tons/yr

Pollutant which defines Potential to Emit: Carbon Monoxide

3.2. Federal Requirements

No federal regulations other than NSPS SubPart JJJJ (40 CFR 60) are applicable to the proposed project.

The engines will be manufactured after June 1, 2008 and have a capacity greater than 500 hp but less than 1,350 hp and construction will commence after June 12, 2006. Therefore, in accordance with 40 CFR 60.2430, 40 CFR 60, Subpart JJJJ is applicable to this project.

The following NSPS emission standards are applicable to the proposed generators

Table 3-1 Summary of 40 CFR 60, Subpart JJJJ Table 1.

Engine Type and Fuel	Maximum engine power	Manufacturer Date	Emission standards ^a					
			g/HP-hr			ppmvd at 15% O ₂		
			NO _x	CO	VOC ^b	NO _x	CO	VOC ^b
Digester Gas (except lean burn 500≥HP<1,350)	HP≥500	7/1/2007	3.0	5.0	1.0	220	610	80
Digester Gas Lean Burn	500≥HP<1,350	1/1/2008	3.0	5.0	1.0	220	610	80

^a Owners and operators of stationary non-certified SI engines may choose to comply with the emission standards in units of either g/HP-hr or ppmvd at 15% O₂.

^b For the purposes of this subpart, when calculating emissions of volatile organic compounds (VOC), emission of formaldehyde should not be included.

The requirements of 40 CFR 60.4233(f) are applicable to this project. A maintenance plan and records of conducted maintenance will be prepared and available at the site. An initial performance test will be conducted and subsequent performance testing conducted every 8,760 hours or 3-years whichever ever comes first. Performance testing will be completed in accordance with the procedures in 40 CFR 60, Subpart JJJJ, Table 2.

40CFR 60.4243(g) does not apply to this application. The engines do not require three-way catalysts /non-selective catalytic reduction to meet the emission standards because they are lean burn engines and not rich burning engines. EPA's interpretation of the applicability of this requirement for these type of engines is included in Appendix F.

Notifications will be made in accordance with the NSPS general provisions and Section 60.4245 of 40 CFR 60, Subpart JJJJ.

3.3. Rules for the Control of Air Pollution in Idaho (IDAPA 58.01.01)

IDAPA 58.01.01.123 Certification of Documents

Based on information and belief formed after reasonable inquiry, all statements and information contained in the application are true, accurate, and complete.

IDAPA 58.01.01.128 Confidential Information

The information submitted in the application is subject to public disclosure unless submitted under a secret trade claim.

IDAPA 58.01.01.130 Startup Shutdown, Scheduled Maintenance, Safety Measures, upset and Breakdown

If an excess emission event occurs during startup shutdown, scheduled maintenance, safety measures, upset or breakdown, Cargill Environmental Finance will comply with IDAPA 58.01.01.130 through IDAPA 58.01.01.136.

IDAPA 58.01.01.156 Total Compliance

Cargill Environmental Finance understands that when more than one section of rules applies then all such rules must be met to be considered in compliance.

IDAPA 58.01.01.201 Permit to Construct Required

Cargill Environmental Finance will obtain a permit to construct from the Department which satisfies the requirements of Sections 200 through 208. The proposed project does not meet the permit to construct exemption criteria contained in Sections 220 through 223 of the Rules.

IDAPA 58.01.01.203 Permit Requirements for New and Modified Stationary Sources

This permit application demonstrates that the project will comply with all applicable emissions standards, ambient air quality standards, and toxic increments. See the modeling protocol report attached in Appendix B.

IDAPA 58.01.01.210 Demonstration of Preconstruction Compliance with Toxic Standards

This permit application demonstrates preconstruction compliance with the Toxic Standards. See the ambient impacts assessment in Section 5.

IDAPA 58.01.01.223 Exemption Criteria, Recordkeeping, and Reporting for Toxic Air Pollutant Emissions

The proposed project does not meet the exemption criteria specified in sections 01 through 04 of Section 223.

IDAPA 58.01.01.300 Procedures and Requirements of Tier I operating Permits

The facility is not considered a major source and not subject to these requirements.

IDAPA 58.01.01.577 Ambient Air Quality Standards for Specific Air Pollutants

The proposed project meets the ambient air quality standards specified in Section 577. See the ambient impacts assessment in Section 5.

IDAPA 58.01.01.578 Designation of Attainment, Unclassifiable, and Nonattainment Areas

The proposed project is located in Cassia County which is currently classified as unclassifiable or attainment for criteria pollutants. Cargill Environmental Finance acknowledges that DEQ annually reviews areas for classification.

IDAPA 58.01.01.585 Toxic Air Pollutants Non-Carcinogenic Increments

The proposed project will result in emissions of non-carcinogenic toxic air pollutants including acrolein, isomers of xylene, selenium, styrene, toluene, and trichloroethylene. These emissions will not exceed their respective screening emission levels with the exception of trichloroethylene. See the ambient impacts assessment in Section 5.

IDAPA 58.01.01.586 Toxic Air Pollutants Carcinogenic Increments

The proposed project will result in potential emissions of carcinogenic toxic air pollutants including acetaldehyde, benzene, dichloromethane, formaldehyde, trichloroethylene,

nickel and vinyl chloride. The emissions of acetaldehyde does not exceed its screening emission level, however emissions for benzene, dichloromethane, formaldehyde, nickel, trichloroethylene, and vinyl chloride have potential to exceed each of their respective screening emission levels. Modeling results indicate all emissions for carcinogenic toxic air pollutants are below their respective AACCs. See the ambient impacts assessment in Section 5.

IDAPA 58.01.01.590 New Source Performance Standards

Cargill Environmental Finance acknowledges that the proposed project must comply with the NSPS set forth in 40 CFR Part 60. Please see section 3.3 of this application.

IDAPA 58.01.01.591 National Emission Standards for Hazardous Air Pollutants

The proposed project complies with 40 CFR Part 61 and 40 CFR Part 63.

IDAPA 58.01.01.625 Visible Emissions

Cargill Environmental Finance will not discharge any air pollutant which is greater than 20% opacity from the stacks for more than 3 minutes in a 60 minute period. Cargill will comply with specified test methods and procedures.

IDAPA 58.01.01.650 & 651 Rules for the Control of Fugitive Emissions & General Rules

Cargill Environmental Finance will take all reasonable precautions to prevent particulate matter from becoming airborne.

IDAPA 58.01.01.675 & 676 Fuel Burning Equipment – Particulate Matter & Standards for New Sources

The project will not discharge particulate above the applicable grain loading standard.

IDAPA 58.01.01.700--702 Particulate Matter – Process Weight Limitations

The emitting source is not considered process equipment and therefore the regulations do not apply to this source.

IDAPA 58.01.01.760 Rules for the Control of Ammonia from Dairy Farms

The proposed project is located on property leased from East Valley Cattle. The impact analysis for the emissions from the proposed generators demonstrates compliance with applicable standards at the boundary of the leased property. The dairy is owned and operated separately from the generators. Therefore these rules do not apply to this source.

IDAPA 58.01.01.775 Rules for the Control of Odors

All reasonable precautions will be taken to control odors.

4 POTENTIAL EMISSION ESTIMATES

4.1. Equipment and Source Description

Four Genset electrical generators are proposed to be installed adjacent to each other. The four generators are described in Table 4-1. There are no emission controls proposed for the generators.

Table 4-1

Equipment Description

Equipment / Source Description	Emission Controls
<u>Anaerobic Digester & Electric Generators</u>	
<u>Anaerobic Digester</u>	
Capacity: 8,250,000 gallons	Internal Combustion Engines (Generator Engines No. 1 - 4)
Throughput: 375,000 gallons per day	
Biogas Production: 1,140,000 c.f. per day	
<u>Generator Engine No. 1</u>	
Manufacturer: Guascor	
Model: SFGLD 560	
Rated Power: 1057 horsepower	
Ignition Type: Spark	
<u>Generator Engine No. 2</u>	
Manufacturer: Guascor	
Model: SFGLD 560	
Rated Power: 1057 horsepower	
Ignition Type: Spark	None
<u>Generator Engine No. 3</u>	
Manufacturer: Guascor	
Model: SFGLD 560	
Rated Power: 1057 horsepower	
Ignition Type: Spark	
<u>Generator Engine No. 4</u>	
Manufacturer: Guascor	
Model: SFGLD 560	
Rated Power: 1057 horsepower	
Ignition Type: Spark	

4.2. Source Parameters

Each of the generators will have a 10-inch diameter stack extending 27 feet above the ground surface. The vendor estimated, based on the design parameters and modeling the operation of the units, that the typical stack temperatures and velocity will be 628° K and 39.93 meters/second, respectively.

4.3. Emission Factors

The emission factors used to estimate emissions from the generators came from multiple sources including AP-42, EPA's WebFire database and vendor information. The specific vendor information was determined most reliable, since it represents the specific operating conditions and equipment proposed for the project.

AP-42 Section 3.1 has published emission factor data for POTW digester gas-fired stationary gas turbines. In addition, AP-42 Section 3.2 has published emission factors for natural gas fired reciprocating engines. EPA's WebFire database provides limited data from internal combustion engines fueled from POTW digester gas. The WebFire data was collected in the early 1990s and is rated U (unrated)¹ by EPA. It does not provide supporting details about the source and operating conditions.

With the exception of particulate, vendor information was used to estimate emissions for all of the primary pollutants. The PM₁₀ and PM_{2.5} emission factors were selected from AP-42 Section 3.2, Table 3.2 – Uncontrolled Emission Factors for 4-stroke Lean – Burn Engines. The table presents D-Rated PM-10 (filterable) and PM Condensible emission factors for natural gas lean burn reciprocating engines. The PM-10 emissions represent the sum of the PM-10 (filterable) and the PM Condensable fractions, since the condensable fraction is likely less than 10 microns.

TAP emission data from generators using digester gas fuel is likely more representative than data from generators using natural gas fuel. AP-42 Section 3.2, Table 3.1-7 Emission Factors for Hazardous Air Pollutants from Digester Gas-Fired Stationary Gas Turbines presents D-Rated uncontrolled emission factors acetaldehyde, formaldehyde, nickel and selenium.

Other HAPs are presented in the data, but reported as nondetectible. The remaining emission factors were extracted from the EPA WebFire database. This data was identified as the least reliable of the available data. It is unrated by EPA and provides no supporting information to evaluate its relevance to the proposed project.

¹ Emission factor is developed from source tests which have not been thoroughly evaluated, research papers, modeling data, or other sources that may lack supporting documentation. The data are not necessarily "poor," but there is not enough information to rate the factors according to the rating protocol. "U" ratings are commonly found in L&E documents and FIRE rather than in AP 42.

4.4. Potential to Emit / Emissions Estimates

The potential to emit for the proposed project is shown in Table 4-2. Please see Appendix D for detailed emission calculations.

The generators will emit acrolein, isomers of xylene, styrene, toluene, selenium and trichloroethylene which are non-carcinogenic toxic air pollutants (TAPs) listed in IDAPA 58.01.01.585. The potential emission estimates for these compounds do not exceed their respective TAP screening emission levels (EL) with the exception of trichloroethylene. The generators will also emit acetaldehyde, benzene, dichloromethane, formaldehyde, nickel, trichloroethylene and vinyl chloride which are carcinogenic TAPs listed in IDAPA 58.01.01.586. The potential emission estimates for acetaldehyde does not exceed its TAP EL. However, modeling was conducted for benzene, dichloromethane, formaldehyde, nickel, trichloroethylene, and vinyl chloride because potential emission estimates exceed their respective TAP ELs. Modeling demonstrates compliance with the Acceptable Ambient Concentration (AAC).

Table 4-2
Potential Emission Rates for Genset Generators

Pollutant	PTE (lbs/hr)	PTE (tons/yr)
PM ₁₀	0.28	1.22
SO ₂	20.05	87.8
NO _x	9.32	40.8
CO	20.51	89.8
VOC	9.32	40.8
Acetaldehyde	1.5E-03	6.4E-03
Acrolein	7.2E-04	3.2E-03
Benzene	1.9E-02	8.4E-02
Dichloromethane	2.8E-03	1.2E-02
Formaldehyde	5.3E-03	2.3E-02
Isomers of Xylene	3.8E-03	1.7E-02
Nickel	5.6E-05	2.4E-04
Selenium	3.1E-04	1.3E-03
Styrene	1.5E-03	6.4E-03
Toluene	7.3E-03	3.2E-02
Trichloroethylene	5.6E-04	2.4E-03
Vinyl Chloride	1.6E-03	6.8E-03

4.5. Emission Limits

The concentration of the Hydrogen Sulfide (H_2S) entering the generators from anaerobic digester shall not exceed 2,500 ppm. Cargill Environmental Finance proposes to perform the following to monitor the quantity of hydrogen sulfide (H_2S) produced by the anaerobic digester:

- Within 120 days of startup, we shall install, calibrate, maintain, operate, and record an H_2S gas monitor that shall be placed down stream of digester and upstream of the electric generators, and the biogas flare to measure the H_2S concentrations in the biogas produced by the anaerobic digester. The monitor shall be installed in accordance with the O&M manual and the manufacturer's specifications.
- Calibration of the H_2S monitor shall be performed and recorded semi-annually or per manufacturer's recommendations.
- The results of the H_2S concentrations from the H_2S monitor shall be recorded once per week. The H_2S monitoring shall be re-evaluated after reaching maximum operating capacity and review of H_2S concentration data. The frequency may be modified with IDEQ approval.

The H_2S produced by the digester is based on the biogas production of 1,140,000 cubic feet of biogas per day. This is the maximum biogas that the digester will produce in one day based on the production in our other digesters in operation.

Cargill Environmental Finance proposes to perform the following to monitor the volume of biogas produced by the anaerobic digester per day:

- Within 120 days of startup a gas flow meter will be installed, calibrated, maintained, and operated. It will be placed down stream of digester and upstream of the electric generators, and the biogas flare to measure the amount of biogas produced by the anaerobic digester. The monitor will be installed in accordance with the O&M manual and the manufacturer's specifications.
- Calibration of the gas flow meter will be performed and recorded semi-annually or per manufacturer's recommendations.
- The results of the gas flow meter will be recorded once per day. The biogas volume monitoring will be reevaluated after reaching maximum operating capacity and review of biogas volume data.

5 AMBIENT IMPACT ASSESSMENTS

Air quality modeling was conducted consistent with the Idaho Department of Environmental Quality (IDEQ) Dispersion Modeling Guidelines (Guidelines), revised December 31, 2002, and the general Ambient Air Quality Modeling Protocol submitted to IDEQ and approved April 19, 2008. The Screen3 output file is attached in Appendix D.

The tables below show the modeled results of the ambient air impacts from the proposed source emissions. The modeled impacts from criteria pollutants are compared to National Ambient Air Quality Standards (NAAQS). The modeled impacts from TAPs are compared to State of Idaho AACs.

Based on the analysis performed, the proposed stationary source will not cause or significantly contribute to a violation of any ambient air quality standard and demonstrates pre-construction compliance with IDAPA 58.01.01, Section 161 with regards to TAP emissions.

Table 5-1
Modeling Results for Criteria Pollutants

	SO ₂			PM ₁₀		CO		NO ₂	Pb
	3-Hr	24-Hr	Annual	24-Hr	Annual	1-Hr	8-Hr	Annual	Qtrly

PERMIT TO CONSTRUCT APPLICATION

Revision 3
03/26/07

Please see instructions on page 2 before filling out the form.

All information is required. If information is missing, the application will not be processed.

IDENTIFICATION

1. Company Name	Cargill Environmental Finance
2. Facility Name (if different than #1)	East Valley Cattle
3. Facility I.D. No.	1
4. Brief Project Description:	Dairy Anaerobic Digester which captures biogas to produce electricity through

FACILITY INFORMATION

5. Owned/operated by: (✓ if applicable)	<input type="checkbox"/> Federal government <input type="checkbox"/> County government <input type="checkbox"/> State government <input type="checkbox"/> City government
6. Primary Facility Permit Contact Person/Title	Ryan Coleman - Project Engineer
7. Telephone Number and Email Address	208-345-2324 or/cell 208-340-6421 ryan_coleman@cargill.com
8. Alternate Facility Contact Person/Title	Gary Rimmey Senior Operations and Maintenance Manager
9. Telephone Number and Email Address	984-952-3887 gary_rimmey@cargill.com
10. Address to which permit should be sent	Mail stop 139 12700 Whitewater Dr. (AND) 1410 Camel Back Ln
11. City/State/Zip	Minnetonka, Minnesota 55343 Suite 229
12. Equipment Location Address (if different than #10)	Bettencourt B-6. Boise, ID 83702
13. City/State/Zip	3350 S. 2400 E. Jerome Idaho 83338
14. Is the Equipment Portable?	<input type="checkbox"/> Yes <input checked="" type="checkbox"/> No
15. SIC Code(s) and NAISC Code	Primary SIC: 1629 Secondary SIC (if any): NAICS: 237130
16. Brief Business Description and Principal Product	Anaerobically digest cow manure and capture methane to power engine and produce electricity.
17. Identify any adjacent or contiguous facility that this company owns and/or operates	

PERMIT APPLICATION TYPE

18. Specify Reason for Application	<input checked="" type="checkbox"/> New Facility <input type="checkbox"/> New Source at Existing Facility <input type="checkbox"/> Unpermitted Existing Source
	<input type="checkbox"/> Modify Existing Source: Permit No.: _____ Date Issued: _____
	<input type="checkbox"/> Permit Revision
	<input type="checkbox"/> Required by Enforcement Action: Case No.: _____

CERTIFICATION

IN ACCORDANCE WITH IDAPA 58.01.01.123 (RULES FOR THE CONTROL OF AIR POLLUTION IN IDAHO), I CERTIFY BASED ON INFORMATION AND BELIEF FORMED AFTER REASONABLE INQUIRY, THE STATEMENTS AND INFORMATION IN THE DOCUMENT ARE TRUE, ACCURATE, AND COMPLETE.

19. Responsible Official's Name/Title	Ryan Coleman - Project Engineer	
20. RESPONSIBLE OFFICIAL SIGNATURE		Date: 5-12-08
21. <input checked="" type="checkbox"/> Check here to indicate you would like to review a draft permit prior to final issuance.

PERMIT TO CONSTRUCT APPLICATION

Revision 3
03/27/07

Please see instructions on page 2 before filling out the form.

IDENTIFICATION				
Company Name: Cargill Environmental Finance		Facility Name: East Valley Cattle		Facility ID No: 1
Brief Project Description:		Dairy Anaerobic Digester that collects biogas & makes electricity		
EXEMPTION				
Please refer to IDAPA 58.01.01.222.01.c and d for a list of internal combustion engines that are exempt from the Permit to Construct requirements.				
ENGINE (EMISSION UNIT) DESCRIPTION AND SPECIFICATIONS				
1. Type of Unit: <input checked="" type="checkbox"/> New Unit <input type="checkbox"/> Unpermitted Existing Unit <input type="checkbox"/> Modification to a Unit with Permit #: _____ Date Issued: _____				
2. Use of Engine: <input type="checkbox"/> Normal Operation <input type="checkbox"/> Emergency <input type="checkbox"/> Back-up <input checked="" type="checkbox"/> Other: Renewable Energy				
3. Engine ID Number: 1		4. Rated Power: <input checked="" type="checkbox"/> 1057 Brake Horsepower(bhp) <input checked="" type="checkbox"/> 710 Kilowatts(kW)		
5. Construction Date: 5/27/08		6. Manufacturer: Guascor		7. Model: SFGLD 560
8. Date of Modification (if applicable):		9. Serial Number (if available):		10. Control Device (if any):
FUEL DESCRIPTION AND SPECIFICATIONS				
11. Fuel Type	<input type="checkbox"/> Diesel Fuel (#) (gal/hr)	<input type="checkbox"/> Gasoline Fuel (gal/hr)	<input type="checkbox"/> Natural Gas (cf/hr)	<input checked="" type="checkbox"/> Other Fuels (unit:cf/hr)
12. Full Load Consumption Rate				12,185
13. Actual Consumption Rate				11,875
14. Sulfur Content wt%		N/A	N/A	
OPERATING LIMITS & SCHEDULE				
15. Imposed Operating Limits (hours/year, or gallons fuel/year, etc.):				
16. Operating Schedule (hours/day, months/year, etc.): 24 hours a day 365 days a year
